

Fluoro-Fill™ Keeps Felt Life Longer

"Fluoro-Fill™" repairs pits or grooves caused by doctor blades.

A mill in the South paid for their investment in "Fluoro-Fill™" in 2 months. The felts were wearing out in 35-40 days because of corrosion on their felt rolls. The rolls were repaired with "Fluoro-Fill™" and the next felt was still operating after 6 months. Frank Chapman, Fluoron's Vice President points out there are similar savings in repairing dryers where the doctors have scored or grooved the surface

Fluoro-Wear™ Roll Covers have 10 Times Greater Wear

The U.S. Patent office has issued a Patent Number 6,471,627 on this Roll Cover for the paper industry.

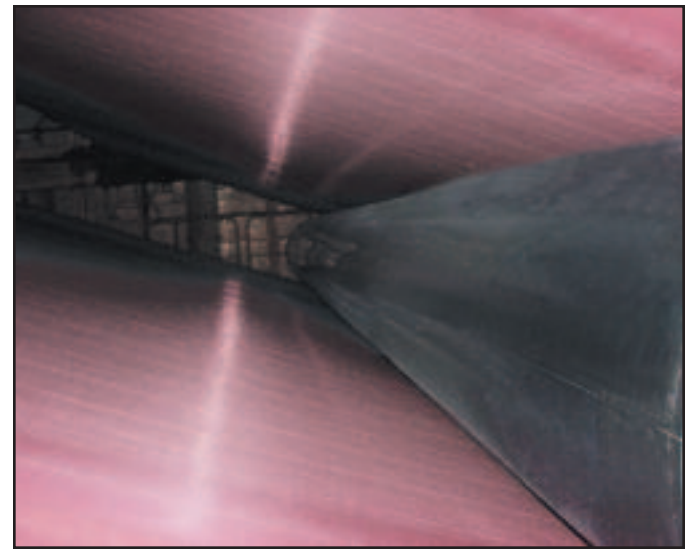

"There are two big advantages of *Teflon*® roll covers reinforced with carbon. First: The reinforced cover outwears an unreinforced roll cover by ten fold. Second: a Conductive form of carbon eliminates the "static build-up" that has been a shock hazard in some roll applications. The good news is that the reinforcement does not affect the outstanding release characteristics of *Teflon*®," says Randy Chapman, Fluoron's president. "Also this is absolutely the best roll cover for bowed rolls."

Fluoro-Wear™ Stopped Build-Up On Felt Stretch Roll

One mill in the mid-west with a build-up problem on the stretch roll of the first felted section had tried rubber covers which did not provide adequate release, and a coating, which provided release but wore off. In 1999, they installed a Fluoro-Wear™ roll cover. It provided complete release and was still running 4 years later.

*This "Fluoro-Wear 102™" cover based on *Teflon*® has been in service four years and wear measurements indicate that it will have greater than a ten-year life.*

Are Your Dryers Clean Like This?

If not, Fluoron's BCS Roll Cleaning System will easily remove starch, size, coating and pitch build up as well as rust, hot melts and contaminants from recycled pulp and keep your dryers like new. Clean dryers mean fewer breaks, better profiles, increased productivity and profitability. Our system is faster and more effective than blasting with sand, soda ash, dry ice or any other grinding equipment, saving you down time and money. The Cleaning System can be used on felt rolls as well. Clean felt rolls will prevent felts losing their seams and will keep the felts straighter.

First pass with Fluoron's BCS Roll Cleaning System

"We increased machine speed 12% with improved quality."
